

To Whom It May Concern, It is my understanding that the NAB is concerned with the traffic and weather service that my subscription satellite radio provides. Maybe they should consider the fact that people are willing to pay monthly to not have to listen to the poor programming that their stations provide, and that the FCC allows. What possible ill effect can the traffic and weather service have. Fewer traffic tie ups, oh no! Actually having accurate up to date weather, the nerve! As I see it this is just another waste of your precious time and resources.
